(54) IMMERSION MEMBRANE APPARATUS

(57)Abstract:

PURPOSE: To effectively peel the non-filterable substance bonded to a membrane surface.

CONSTITUTION: In an immersion membrane apparatus wherein membrane units 11A, 11B are immersed in the liquid of a treatment tank 10 and the filtered treated water transmitted through the membranes of both units is obtained, the membrane units 11A, 11B are arranged in the liquid of the tank so as to be separated by a partition plate 14 and air diffusing devices 15A, 15B are individually installed under the individual membrane units and made alternately operable.

【目的】 東端に付着した非波通伽賀を銀筒から効果的に利 耐せる。

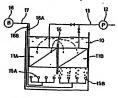

【領域】 処理権10の減中に観ユニット11を浸痕し、観 を透達した単導効率がを得る思規度装置において、最後の顕 ユニット114、118を禁中の仕切板14で属で3名内域 中に配置すると共に、その最々の属ユニットの下方に居々に 社気装置15人、158を設け、他気装置を交互に作動可能

[Patent Attorney]

(57) [Abstract]

[Objective] Rejected matter which deposits in film surface it pe els off from film surface in the effective.

(Constitution) As it seeks membrane unit 11 in liquid of treatm ent ank 10, separating membrane unit 11A,11Bof multiple with partition 14 in liquid in permension membrane module which obtains filtered water which transmitted membrane, it arranges in task internal liquidity provides at integrees 15A,13B individually in downward direction of individualmembrane unit, makes at disperse attemately operation possible.

【特許請求の前別】

【献収収1】 処理権の途中に関ユニットを決策し、風を選 過した返送和理水を持る決策原味を置において、複数の第ユニットを決中の仕切をで属て、場内は中に配乗すると共に、その個々の第ユニットの下方に超く比較、数値を設け、飲気を 個をの第ユニットの下方に超く比較、数値を設け、飲気を 個を交互に作動可能にしたことを特徴とする決定度繁変。

[Claim(s)]

[Cain 1] As it socks membrane unit in liquid of treatment to the separating mechanou unior multiple with partition in flegid in permeasion membrane module which documents filtered water which transmitted membrane, it arranges to instantial spirit, the permeasion membrane module which destinate that it provides air disperser individually infine downward direction of individual membrane unit, air disperser alternately operation immker possible as feature.

[発明の詳報な技術]

[0001]

【意案上の利用分野】この先明は、平威を複数技技所した権 層体や、中空永順を平面状、或いはすせれ状にした既エレメ ントを複数材限した機関体や、管状底を複数本並行に技術 したものを模ユニットとして用いた景楽回鉄変に関する。

[Description of the Invention]

[0001]

[Field of Industrial Application] As for this invention, Isminate which flat membrane multiple sheet islaminated and, Isminate which membrane is made flat surface of the artificial surface or the attain multiple sheet is Isminated and, it regards permeation membrane module which uses those which tubular membrane multiple inparallel are connected as

*85271 Machine Translation - FirstPass

[0002]

【従来の技術】 如理様の液中に上述した様ユニットを思议し、 ・ 鏡ユニットの内線を吸引して調を選出した超過地環水を表 る漫類解験面は従来から公知である。又、 顔の下師に数気装 優を設け進治ケークを射媒させることも会知である。

[0003]

[0004]

【課題を解決するための手段】そこで未免明は、処理権の旅 中に属ニットを設策し、既を迅速した返避光度水を得る派 課職は数において、援数の国ニットを表中の仕物を伝統 > 棚内液中に配置すると共に、その最々の威ユニットの下方 に関心に拠点協変を設け、牧気装置を交互に作均可能にした ことを特徴とする。

[0005]

【笑族明】 昭宗の冬天紘例において、10は始東情で、処理 権の強中には現ユニット11が復実してあり、ポンプ12を 接続した取引管13が収ユニットの内部を吸引し、知道格内 の原液中、原ユニットは18近過したものを選出効果水とし て提水する。 原ユニットは、救盗したように平便の放牧状の membrane ûnit.

[0002]

Prior Art] Membrase unit which description above is done was scaked in liquido in tentment tenk, inside of membrane unit was absorbed and permeation membrane insolute whicholotisms filtered water which membrane was transmitted is public innovelage frommil recently, at disperser is provided in bottom of sito, membrane and also fact thatthe filter cake is exfoliated in public knowledge.

100031

'[Problems to be Solved by the Invention] Driving this perment on membrane module, when it does membrane filtration, concentration polarized layer, gel layer andthe cake layer or other rejected matter deposit in film surface. When and thickness of rejected matter increases, filtration resistance increases, the filtration pressure increases and filtration efficiency decreases considerably. Because of this in dodirection of membrane unit air disperser to provide, When constant time membrane filtration operation is done, or in membrane filtration operation becomes fixed filtration pressure, discontinuing driving, it does reverse washing, but air disperser it operates onfront and back of this reverse washi surface entirety of membrane unit pours thegas bubble from under, rejected matter which with shear stress of gas bubble and theupper direction water stream which between membrane upper direction are donedeposits in film surface it is necessary to peel off. In this case, liquid of inside tank downwardly directed stream doing thearound membrane unit, being necessary to maintain countercurrent space which circulates fill factor of membrane to inside treatment tank just countercurrent space portion means to decrease.

[0004]

[Means to Solve the Problems] Then as this invention sooks me bursone usin it liquid of treatment teak, expanting meinbrane unit of multiple with partition in liquid in the permention membrane module which obtains filtered water which, it transmitted membrane, arranges in the tank internal liquid, it reprovides air disperser individually in downward direction of their dividual membrane unit, air disperser alternatoly it designates that it anknotoperation possible as feature,

100051

[Working Example(s)] In each Working Example in illustration, 10 with treatment tank, membrane unit 11 issoaked in liquid of treatment tank, auction pipe 13 which connects pump 12absorbs inside of membrane unit, water sample does in starting liquid inside the treatment tank, with those which

ISTA's ConvertedKokai(tm), Version 1.2 (There may be errors in the above translation. ISTA cannot be held liable for any detriment from its use. WWW: http://www.intlscience.com Tel:800-430-5727)

【0006】翌1の実施例では、処理権10内に2つの第二 ニット11人、11日を上地が波面下の仕切抜14で属てと 解接状に配配しており、も原ユニット11人、118の下方 には個々に数気装板15人、16日が設けてある。4つの数 気味養16人、16日は共運のプロワー16に分岐管17で 接続し、管に設けた解明弁18人、188で何々に作動でき るようになっている。製造選連収を中止し、逆死を行う救後 仁朝防井18A、188老交互仁朝荷し、例えば飲気装置1 6Aから16分類、気泡を放ユニット11Aに遊びせ、次の 16分は散気装置16日から気効を収ユニット11日に対び せ、これを鉄道す。これにより数気装置15人から浮上する 気泡によって収ユニット11Aの原の間には上向変が生じ、 気泡と上向水数により銀ユニット11人の痕面に付着した非 並通物質は製薬から軽減し、同時に製ユニット11日の底隔 には下内波が生じ、この下向水流によって収退に付着した非 基遺物質が利用される。 数気装置 158が作動しているとき は上記とは逆で鎮ユニット118の最高に付着した非越遊物 質は気池と上内水政により譲渡から利益し、東ユニット11 Aの製造に付着した非滅道物質は展験に生じた下向水流で減 高から制度する。尚、数気は皮の運転を中止して行っても、 車の運転中に行ってもよい。

[0007] 第2の実施的では、効果を10向に4つの成ユ ニナト114、116、110、110年を設めた協作14 人、148、14でで数で13機械に正確しており、各国ユ ニトロアが同じませた数を乗ぎせる。158、156、1 130が続けてある。4つの放展をは未来の100場所き16、1 130が続けてある。4つの放展をは未来の100場所き16、1 5とができる。成盟国軍性を100場所を16、1 5とができる。成盟国軍性を100場では100場では100場では100場では100場では100場では100場所を16の場所を100場では100 transmitted membrane unit 11 as filtered water. As for membrane unit, way you mention earlier, Isruinste of multiple sheet offse flat membrane. Or laminate of multiple sheet of membrane element which hollow fiber membrane is made theflat surface or rattan, Or it is something which subular membrane multiple in parallel is connected.

[0006] With Working Example of Figure 1, inside treatment to nk 10 upper edge separating the2 membrane unit 11A,11B with partition 14 under liquid surface, it is stranged in adjacent, theair disperser 15A,15B is provided individually in downward direction of each membrane unit I1A, IIB. You connect air disperser 15A,15B of 4 to common blower 16 with manifold 17, you are designed in such a way that it can be operated individually with opening and closing valve 18A,18B which is provided in tube. membrane filtration operation is discontinued, ing and closing valve 18A,18B is opened and closed alternatelyon front and back which does reverse washing, 15 min and gas bubbleare poured to membrane unit 11A from for example air disperser 15A, following 15 min pours thegas bubble to membrane unit 11B from air disperser 15B, repeats this. Because of this upwards flow occurs between membrane of membrane unit 11A due tothe gas bubble which floating is done from air disperser 15A, rejected matter whichdeposits in film surface of membrane unit 11A with gas bubble and upperdirection water stream peels off from film surface downwardly directed stream occurs simultaneously between membrane of membrane unit 11B, rejected matter whichdeposits in film surface with this downward water stream is exfoliated. When 'air disperser 1513 operates, being opposite to description above, therejected matter which deposits in film surface of membrane unit 11B peels off from the film surface with gas bubble and upper direction water stream, rejected matter whichdeposits in film surface of membrane unit 11A peels off from film surface with thedownward water stream which it occurs between membrane. Furthermore diffused air discontinuing driving membrane, also doing it may do on on stream of membrane.

[0007] With Working Example of Figure 2, lands: Irestance to at 10 H separates membrane unit 11A, 11B, 11C, 11Doff with three partition 14A, 14B, 14C and is arranged in "adjacent, air disperser 15A, 15B, 15C, 15D provided individually in downward facetion of each membrane unit. You can connect affection of each membrane unit. You can connect affection of each membrane unit. You can connect affection of which the membrane of the forest of 4 to common blowes 16 with themsatible 17, air disperser of 4 to common blowes 16 with themsatible 17, air disperser of 4 to common blowes 16 with the provided in mamifold. While doing membrane silication operation, or it discontinues driving, operates opening and closing valveon front and back of evertee washing, 15 min address operates in order office for example air disperser 15A, 15B, 15C, 15D, or 15A and 15C, 15B and 15Doperates in 15 min afferts operated in 15 unit at membranism.

Jr - '95271 Machine Translation - FirstPass

着した弁選場教養を設定し、作為していない教気破板の上の 版ユニットの検索には下典数が生じ、この下向水気が成面に 付着した非議遇物質を採摘から例成する。 Between membrane of membrane unit on air disperser which operates upwared flowdue to gas bubble occurs, rejected matter where gas bubble and upportinection water stream deposit in film swriace point off, downwardly directed stream occursbowen membrane of membrane unit on air disperser which does not operate therejected matter where this downward water stream deposits in film surface poels off fromthe film surface.

[8000]

(長男の別別) は上で明らかなように、教教業者を実践にか 動することで、教育することで、教育などの第二十つの間 脚に対象による上の数が使じ、実施上上の水象とにより数 前に対象に大変が動物を参加する。そして、物理や会して いる性数質の上の日ニュットの認知には下昇記が多じ、 この予決対象が回に参した象型が高く利利する。 で、下昇記を生じるせる月記ペースを第二十一トの間に扱 つる数が似くなるが、数型ペーの記を加えて 別見となった。

[8000]

[Effects of the Invention] Way it is clear at above, air dispenser by fact that it operates intermetely, between membrane of a commitment will on air dispenser which operates supress from the to gas bubble causes, rejected matter which resides where the surface with wint part burbly directed interms occurs between the part of the surface of the part of the surface which is manufactor of membrane unit on air dispenses where the membrane of membrane unit on air dispenses which discontinues operation rejected antier where this downward water streamdeposits in film surface peels off. Therefore, because necessity to maintain constructured space which consensate downwardly directed stream between membrane unit also to transmissions. The surface membrane till factor to treatment unknic breasers, greatly ministurization it does size of treatment tank which when it is filled, usestim northerne unit of also, same number.
